Protect Your Company and Your Customers With Ransomware Services From 360BC Group

ORANGE, Calif., —360 BC Group, an Orange County marketing and technology firm, is proud to announce a new ransomware protection service.

Online security will be an ongoing issue with an ever-escalating arms race between those trying to protect confidential information, and those trying to steal it. 360's ransomware protection service joins the company's end-to-end suite of online services, which includes hosting, security and ADA and GDPR compliance reviews.

“In 2015 a group of Russian Hackers was able to gather confidential material from more than 420,000 websites. Don't assume your company is safe because it's not in the Fortune 500,” 360 co-founder Ron Zayas said. “Thieves would prefer not to work hard to steal, and smaller companies are easier to hack, especially if important information has already been acquired.”

This comprehensive service will be made available to any entity that uses our servers for hosting. 360 will install a number of effective protocols to protect sites from ransomware attacks. The cost is \$500 per month.

“No system can guarantee 100% immunity from outside attacks, but with the right CMS, due diligence and the other infrastructure solutions we provide, your site stands a much better chance of weathering these cyber-storms,” Zayas said.
